

UI DESIGN

## MUSIC PLAYER

### PURPOSE & CONCEPT

I created this design for a music streaming mobile app with the goal of delivering a clean, modern, and immersive listening experience. The concept focused on putting the music at the center—using full-screen album art to create impact—while ensuring navigation stayed minimal and intuitive. The idea was to blend functionality with mood, allowing users to enjoy their favorite tracks without distractions.

### DESIGN APPROACH

The layout uses a dark theme with yellow accents for strong contrast and to highlight key actions. The player screen includes bold track and artist details, a smooth progress bar, and easily accessible controls at the bottom for comfort in one-handed use. Login and sign-up screens follow the same clean style, ensuring brand consistency from entry to playback. Rounded elements, subtle shadows, and balanced typography maintain a modern feel while enhancing readability.

### RESULT

The final design delivers a stylish, user-focused interface that feels both functional and immersive. By combining bold visuals, clear navigation, and consistent branding, the app creates a smooth journey from sign-up to playback, making it easy for users to stay engaged with their music.
